Average Delay Days

Delay Insight

- Majority of delays fall within 1–3 day range.
- A small number of states contribute disproportionately to delay volume.
- Delay spikes coincide with high-demand periods.
- Overall delay rate remains below 7%, indicating controlled operational risk.

Overall Performance

- 93.2% on-time delivery
- 12.09-day average delivery time
- 6.77% delay rate

Regional Insights

- RR highest delivery time
- SP most efficient state

Fulfillment Stage Cycle Time Comparison

- Carrier stage is primary delay driver

Strategic Recommendation

- Improve carrier coordination
- Monitor peak season capacity
- Focus on underperforming states
